

the category trader's rate quote is generated if a predefined condition for generating the category trader's rate quote is identified, wherein the predefined condition for generating the category trader's rate quote exists if the predefined cause for rejecting the request for the proposed financial transaction is identified and if a predetermined setting of a request for quote parameter corresponding to the identified cause for rejecting the request for the proposed financial transaction is likewise confirmed by at least one of the transaction server and the rate server;

automatically prompting the user at the terminal for a selection of the generated rate quote for the proposed financial transaction, wherein the generated rate quote comprises the executable rate quote if the predefined condition for generating the executable rate quote is identified, and wherein upon failure to identify the predefined condition for generating the executable rate quote, the generated rate quote comprises the category trader's rate quote if the predefined condition for generating the category trader's rate quote is identified;

automatically holding the generated rate quote for a predetermined period of time for the user;

receiving a request by the transaction server via the terminal for execution of the proposed transaction for the user in accordance with the selection by the user of the generated rate quote; and

handing off the request for execution of the proposed transaction by the transaction server to a hand-off server for automatically executing the proposed transaction for the user in accordance with the generated rate quote upon receipt of the request for execution within the predetermined period of time.

67. (New) A computer system for data management of a financial transaction, comprising:

a terminal adapted for receiving a request for a user for a proposed financial transaction;

at least one transaction server coupled to the terminal and at least one rate server coupled to the transaction server adapted for generating a rate quote consisting of one of an executable rate quote and a category trader's rate quote for the

a' proposed financial transaction, wherein the executable rate quote is generated if a predefined condition is identified, wherein the predefined condition for generating the executable rate quote exists if a predefined cause for rejecting the request for the proposed financial transaction is not identified by at least one of the transaction server and the rate server, and upon failure to identify the predefined condition for generating the executable rate quote, the category trader's rate quote is generated if a predefined condition for generating the category trader's rate quote is identified, wherein the predefined condition for generating the category trader's rate quote exists if the predefined cause for rejecting the request for the proposed financial transaction is identified and if a predetermined setting of a request for quote parameter corresponding to the identified cause for rejecting the request for the proposed financial transaction is likewise confirmed by at least one of the transaction server and the rate server;

the terminal being adapted for automatically prompting the user for a selection of the generated rate quote for the proposed financial transaction, wherein the generated rate quote comprises the executable rate quote if the predefined condition for generating the executable rate quote is identified, and wherein upon failure to identify the predefined condition for generating the executable rate quote, the generated rate quote comprises the category trader's rate quote if the predefined condition for generating the category trader's rate quote is identified;

a system counter for automatically holding the generated rate quote for a predetermined period of time for the user;

the transaction server being adapted for receiving a request via the terminal for execution of the proposed transaction for the user in accordance with the selection by the user of the generated rate quote; and

the transaction server being adapted for handing off the request for execution of the proposed transaction to a hand-off server for automatically executing the proposed transaction for the user in accordance with the generated rate quote upon receipt of the request for execution within the predefined period of time.
